-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 January 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-43 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-43 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 02 January 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Status: 1-43 pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1- 43 the preamble provides for the a method/process and use of minimizing code, but, since the body of the claims does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass and how the body of the claims will minimize the code. Claims 1-43 are indefinite where they merely recite a use without any active, positive steps delimiting how this use is actually practiced.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 –11, ~~14~~24, and 26-43 are rejected under 35 U.S.C. as being anticipated by Bauer et al. (US Patent No. 6,591,272).

Art Unit: 2171

1. Regarding Claims 1, and 14, Bauer discloses a method and a computer readable for minimizing code needed in a client to synchronize data records in the client with data records in a server system, comprising the steps of:

(a) creating setup information in the client, wherein the setup information enables the server system to identify the client and to provide appropriate commands for the client (see columns 13, 14, lines 64-67, 1-6, respectively Bauer); and

(b) providing the setup information from the client to the server system to allow for synchronization of the data records (see column 9, lines 36-41, Bauer).

2. Regarding Claims 2, and 15, Bauer discloses a method wherein the client data records and the server system data records are stored in a respective client and server database, the method further including the steps of:

(c) detecting a changed record in the client database (see column 9, lines 48-53, Bauer);

(d) dumping the changed record as it exists in the client database (see column 9, lines 60-67, Bauer); and

(e) transmitting the changed record to the server system as it exists in the client database (see column 10, lines 12-23, Bauer).

3. Regarding Claims 3, and 16, Bauer discloses a method further comprising the steps of:

(f) processing the changed record by the server system (see column 10, lines 37-42, Bauer);

(g) compiling a program by the server system to update the client database (see column 9, lines 5-18, Bauer);

(h) transmitting the program to the client (see column 8, lines 30-41, Bauer); and

Art Unit: 2171

(i) executing the program by the client, wherein the client database is synchronized with the server database (see column 12, lines 10-12, Bauer).

4. Regarding Claims 4, and 17, Bauer discloses a method wherein the creating step (a) further includes providing information that describes a format of the data records stored in the client database and a list of commands executable by the client (see column 12, lines 10-22, Bauer).

5. Regarding Claims 5, and 18, Bauer discloses a method wherein the processing step (f) further includes:

(f1) retrieving a data record in the server database corresponding to the changed record (see column 9, lines 60-62, Bauer);

(f2) interpreting the changed record received from the client using the setup information (see column 9, lines 62-67, Bauer); and

(f3) updating the retrieved data from the server database (see column 8, lines 30-35, Bauer).

6. Regarding Claims 6, and 19, Bauer discloses a method further comprising the step of:

j) resolving any conflicts between the changed record transmitted by the client and the retrieved data (see column 11, lines 12-18, Bauer).

7. Regarding Claims 7, and 8, Bauer discloses a method wherein the setup information includes a header portion, wherein the interpreting step (f2) further includes using the header portion (see column 13, lines 64-67, Bauer).

8. Regarding Claim 9, Bauer discloses a method wherein the executing step (i) further comprises using an interpreter in the client (see column 14, lines 13-18, Bauer).

Art Unit: 2171

9. Regarding Claims 10, and 20, Bauer discloses a method wherein the compiling step (g) includes the step of providing object code compiled by the server system (see column 14, lines 48-65, Bauer).

10. Regarding Claim 11, Bauer discloses a method wherein the client data records and the server system data records are stored in a respective client and server database, and wherein the creating step (a) further includes providing information that describes a format of the data records stored in the client database and a list of commands executable by the client, the method further including the steps of (see column 14, lines 36-65, Bauer):

(c) retrieving a changed record in the server database (see column 2, lines 60-62, Bauer);

(d) compiling a program by the server system, wherein the program is for updating the client database(see column 2, liens 49-53, Bauer);

(e) transmitting the program to the client (see column 8, lines 30-41, Bauer); and

(f) executing the program by the client, thereby synchronizing the client database and the server database (see column 12, lines 10-12, Bauer).

11. Regarding Claim 21, Bauer discloses a client computer system for synchronizing data records stored on the client computer system with data records stored on a server system, the client computer system comprising:

a database for storing the data records (see column 6, liens 6-7, Bauer); and

a processor coupled to the database for creating setup information to the server system, wherein the setup information enables the server system to identify the client and to provide appropriate commands for the client (see column 6, lines 7-10, Bauer).

Art Unit: 2171

12. Regarding Claim 22, Bauer discloses a client computer system wherein the system further comprises:

means for detecting a changed record in the client database, and means for transmitting the changed record to the server system (see column 9, lines 62-67, Bauer).

13. Regarding Claim 23, Bauer discloses a client computer system wherein the processor further for executing a program compiled and transmitted by the server system, wherein the program updates and synchronizes the data records stored in the database (see column 10, lines 37-42, Bauer).

14. Regarding Claim 24, Bauer discloses a client computer system further comprising means for downloading and starting the program (see column 11, lines 25-30, Bauer¹).

15. Regarding Claims 26, 30, and 37, Bauer discloses a server system for synchronizing data records stored on the server system with data records stored in a client computer system, the server system comprising:

means for receiving setup information from the client computer system, wherein the setup information includes information to enable the server system to identify the client computer system and to provide appropriate commands for the client computer system (see column 16, lines 38-40, Bauer);

memory for storing the setup information coupled to the means for receiving (see Fig. 1, 10, Bauer);

a processor coupled to the memory (see Fig. 1, 20, Bauer); and

¹ Examiner interprets the step of refreshing the client corresponds to download and start.

Art Unit: 2171

a database coupled to the processor for storing the server system data records (see column 15, lines 55-64, Bauer).

16. Regarding Claim 27, Bauer discloses a server system further comprising means for receiving a changed data record from the client computer system;

wherein, the setup information further describes a format of the data records stored in the client computer system, and the processor interprets the changed data record from the client computer system using the setup information, updates the database, and compiles a program comprising object code executable by the client computer system to update the client data records (see column 16, 48-56, Bauer).

17. Regarding Claim 28, Bauer discloses a server system further comprising means for detecting a changed data record in the database (see column 16, lines 57-59, Bauer);

wherein, the processor updates the database and compiles a program comprising object code executable by the client computer system to update the client data records (see column 16, lines 59-66, Bauer).

18. Regarding Claims 29, 31, and 38, Bauer discloses a server system further comprising means for transmitting the program to the client computer system (see column 17, lines 14-20, Bauer).

19. Regarding Claims 32, and 39, Bauer discloses a method further comprising the steps of:

(b) compiling a program by the server system to update the data records stored in the client computer system (see column 17, lines 21-24, Bauer); and

transmitting the program to the client computer system for execution (see column 12, lines 10-12, Bauer).

Art Unit: 2171

20. Regarding Claims 33, and 40, Bauer discloses a method wherein the setup information further includes information describing a format of the data records stored in the client computer system, and further comprising the steps of:

(b) retrieving a data record in the server system corresponding to a changed record transmitted from the client computer system (see column 17, lines 14-20, Bauer);

(c) interpreting the changed record using the setup information (see column 9, lines 62-67, Bauer); and

(d) updating the retrieved data record (see column 8, lines 30-35, Bauer).

21. Regarding Claims 34, and 41, Bauer discloses a method wherein the compiling step (b) further includes providing object code executable by the client computer system (see column 17, lines 49-54, Bauer).

22. Regarding Claim 35, and 42, Bauer discloses a method further comprising the step of:

(b) detecting a changed data record in the server system(see column 17, lines 64-67, Bauer).

23. Regarding Claims 36, and 43, Bauer discloses a method wherein the setup formation further includes information describing a format of the data records stored in the client computer system, further comprising the steps of:

(b) processing in the server system a changed data record transmitted from the client computer system, wherein the processing step (b) further includes:

(b1) retrieving a data record in the server system corresponding to the changed record (see column 17, lines 14-20, Bauer);

Art Unit: 2171

(b2) interpreting the changed record using the setup information (see column 9, lines 62-67, Bauer); and

(b3) updating the retrieved data record (see column 8, lines 30-35, Bauer);

(c) compiling a program by the server system to update the data records stored in the client computer system (see column 17, lines 21-24, Bauer); and

(d) transmitting the program to the client computer system for execution (see column 12, lines 10-12, Bauer).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12, 13 and 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer (US Patent No. 5,870,759) in view of Alam et al. (US Patent No. 6,324,544).

24. Regarding Claims 12, 13, and 25, Bauer discloses all the claimed limitation except for the client to be a mobile client. However, Alam teaches the method of synchronizing data between a mobile client and a database (see column 11, 12, lines 14-67, 1-63, respectively, Alam). It would have been obvious to one of ordinary skill in the art at the time of the invention to receive update and synchronize data from a handheld or mobile device/client with the motivation of providing access to all type of devices to store data in a database which has more space than the mobile devices which improve the speed of the mobile device and reduce the risk of losing the data since it has been stored on a server.
